Applicant: Donovan Serial No.: 09/810,601 Filed: March 15, 2001

Page 2 of 6

Please replace the paragraph beginning at page 28, line 28 with the following rewritten paragraph:

B3

PyroGlu-His-Trp-Ser-Tyr-D-Lys-Leu-Arg-Pro-ethylamide (SEQ ID NO: 9)

Please replace the paragraph beginning at page 39, line 8 with the following rewritten paragraph:

134

To reduce the risk of unintentional activation of the toxin by human or commonly encountered proteases, the amino acid sequences of the cleavage site are preferably designed to have a high degree of specificity to proteolytic enzymes which do not normally occur in humans (as either human proteases or occurring in part of the foreseeable human fauna and flora). exclusive list of examples of such proteases includes bovine enterokinase, which cleaves the amino acid sequence DDDDK (SEQ ID NO: 50); tobacco etch virus (TEV) protease, which cleaves the (SEQ ID NO: 51); GENENASE® from Bacillus sequence EXXYXQS/G amyliquifaciens, which cleaves the sequence HY or PRESCISSION® protease from human rhinovirus 3C, which cleaves the amino acid sequence LEVLFQGP (SEQ ID NO: 52). above, the letter X indicates any amino acid. All amino acid in the present specification sequences shown are direction from amino terminus to carboxyl terminus, and all nucleotide sequences from 5' to 3', (from left to right) unless otherwise indicated.
